DETAILED ACTION

Examiner's Amendment

An examiner's amendment on the record appears below. Should changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John Miller on June 7th, 2007. The application has been amended as Follows:

IN THE CLAIMS

15. (Currently Amended)

A method for making a membrane electrode assembly (MEA) for a fuel cell, said method comprising:
providing a cathode side diffusion media layer;
depositing a cathode side catalyst layer on the cathode side diffusion media layer;
spraying an ionomer layer on the cathode side catalyst layer;
providing an anode side diffusion media layer;

Art Unit: 1745

depositing an anode side catalyst layer on the anode side diffusion media layer;

spraying an ionomer layer on the anode side catalyst layer;

positioning the diffusion media layers at opposite sides of a membrane so that the ionomer layers faces the membrane; and

~~operating the fuel cell to cause the diffusion media layers to form to the membrane so that the diffusion media layers do not need to be bonded to the~~

~~membrane prior to operating the fuel cell~~ sandwiching the membrane between said

ionomer coated diffusion media layers and incorporating the diffusion media layers and

membrane into the fuel cell without heat-pressing said ionomer coated diffusion media layers to the membrane.

REASONS FOR ALLOWANCE

Claims 15-18 are allowed.

The prior art does not teach or suggest a cell including all of the claimed features. The most pertinent art includes Yen et al. (US 6,495,290 B1) and Fan et al. (U.S. Patent No. 6,893,763). Yen et al. teach a method of making a membrane electrode assembly.

However, the method of Yen et al. includes a heat-pressing step. Fan et al. discloses a polymer electrolyte membrane fuel cell however the catalyst is applied to the ionomer of

Art Unit: 1745

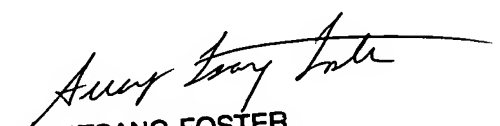

Fan et al. whereas in Applicant's method the catalyst is deposited on the electrodes then the ionomer is applied to the catalyst layer.
